Your message to jhaslip@csu.org couldn't be delivered.

jhaslip wasn't found at csu.org.

Troubleshooting | Office 365 | jhaslip

How to Fix It

The address may be misspelled or may not exist. Try one or more of the following:

- Send the message again following these steps: In Outlook, open the non-delivery report (NDR) and choose **Send Again** from the Report ribbon. Edit the recipient's address, and then click **Send**. If the **Send this message again, click here** ("Click here" and copy-paste the entire recipient address, if prompted) with an Auto Complete List entry, remove the old entry, then re-type the recipient address and **Send**.
- Verify the recipient by phone, for example to check that the address exists and is correct.
- Contact your email admin, if your email forwarding (mail enrichment) address, aliasfeature (mail alias) or distribution group (mailing list) are not working correctly.
- Remove the recipient from Auto Complete List in Outlook or Outlook on the web by Mousing the item in the entry, [redacted] and pressing the Delete key, or by editing the Auto Complete List in Outlook on the web and removing the entry before selecting **Send**.

If the problem continues, forward this message to your email admin. If you're an email admin, refer to the **More Info for Email Admins** section below.

More Info for Email Admins

Status code 550 5.4.4:

This error occurs because the sender sent a message to an email address hosted by Office 365 but the address is (from/to) a domain value not in the authoritative domain. The error is caused by a misconfiguration in Office 365 or in the sender's email system. Check the recipient address and resend the message. If the value in the **Diagnostic Information** section of this NDR contains the phrase "Relay access denied", then the sender's email system is not configured to relay through Office 365.

The email address exists and is correct. - Confirm that the recipient address exists, is correct, and is accepting messages.

Synchronize your directories. - If you have a hybrid environment and are using Azure AD Connect, verify that the recipient email address is synced correctly. In Office 365, check your on-premises directory.

Email forwarding loop. - Check for forwarding rules that aren't behaving as expected. Verify that the recipient address is not in a forwarding loop or mailbox forwarding address setting, or by the recipient has the Mute Email feature.

Recipient has a valid license. - Make sure the recipient has an Office 365 license assigned to their account. Without a license, Office 365 will not accept email for this account. In Azure Portal > Azure Active > select the account > Assigned Licenses > Edit.

Mail flow settings and MX records are correct. - Ensure Exchange mail flow and MX record settings are correct. Mail to a valid user (Office 365 mail flow settings) or other valid recipient (Office 365 mail flow settings) should not be rejected. Use the Office 365 Mail Flow Configurator to make sure the MX records for your domain are configured correctly.

For more information and additional tips for fixing this error, see [redacted]
